✨ Duplicate Coverage Request Check

@maja.pilipovic , @luka.trdina , @marin.ladovic , @mislav.sirac

We've implemented a check to prevent duplicate coverage requests from being sent to AIP. This feature includes both offline and online binding processes, and aids producers, agents, and agent reviewers during request submissions or reviews. It ensures that only unique requests are submitted, minimizing accidental duplications. The check applies to various components within a coverage request, excluding tags, and prompts users for confirmation in case of detected duplicates.
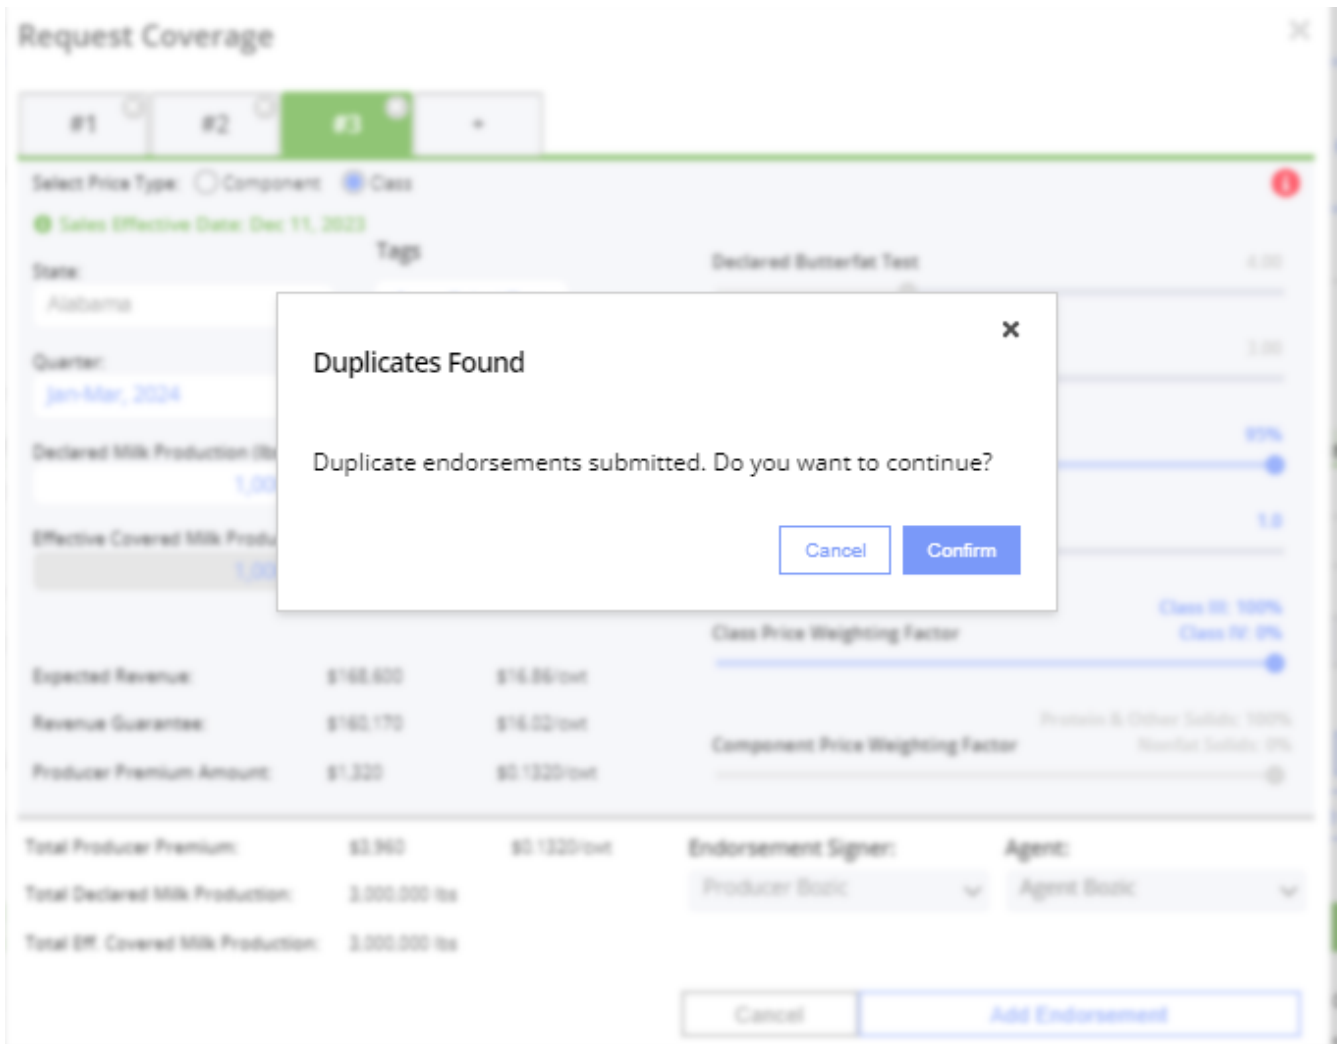

The feature includes two checks: one verifies the existence of an identical active coverage request among all active requests, excluding those in the Canceled status, while the other checks for identical endorsements within the current coverage request being submitted.
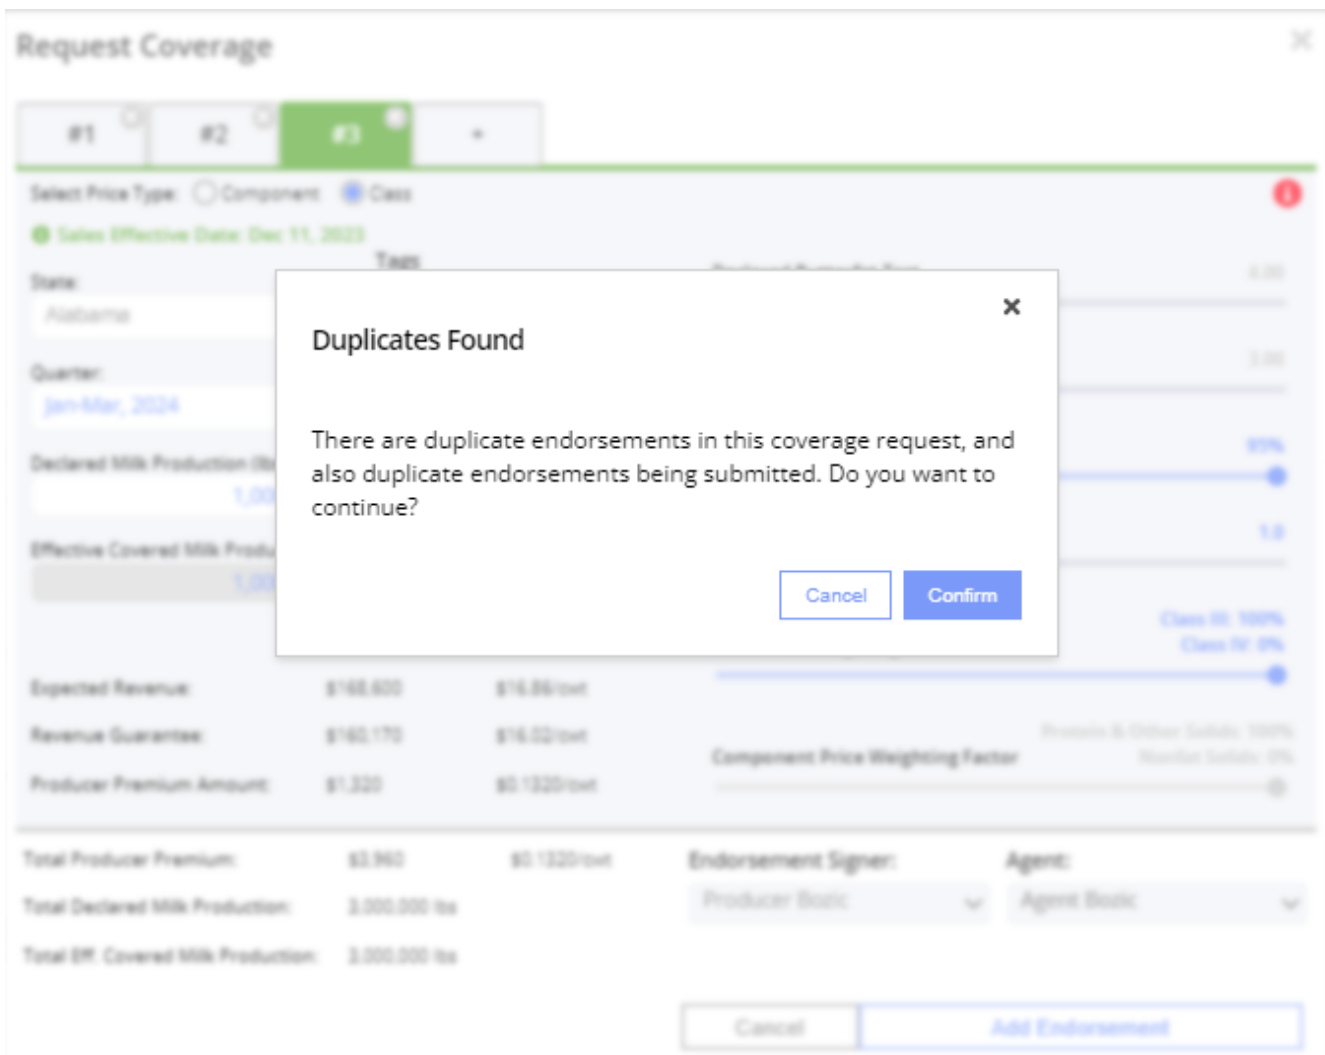

If 1st check finds duplicates:

If 2nd check finds duplicates:

If   1st   and   2nd   checks   are   true:

✨ Agency Licences

@maja.pilipovic , @filip.cogelja , @marin.ladovic

We've added an 'Agency Licences' menu in the Admin Panel for Admin Agents and Global Admins. It allows users to manage one license per state, enabling them to add, edit, and delete licenses. The system prioritizes state-specific license information and defaults to the first listed license when needed. If no licenses are listed, no information will be displayed. This update empowers Admin Agents to efficiently manage state-based licensing information.

✨ Enhanced Display of Operation Eligibility in Admin Panel

@maja.pilipovic , @marin.ladovic

We've enhanced the Admin Panel to display operation eligibility information, independent of the logged-in user. This update ensures that operation eligibility details are universally displayed in the Admin panel, maintaining consistent icon colors and an identical display for all logged-in users, regardless of their assigned roles.

🔧 Improvements

- 🔧 Fixed the issue where, upon accessing the Admin Panel and navigating to 'Insurance Agents', clicking the '+' sign to create a new agent incorrectly displayed 'Delete Insurance Agent' instead of the intended 'Add Insurance Agent'. @marin.ladovic

- 🔧 Fixed the issue where a network error occurred while saving preferences in 'My Account' due to incorrect number input, ensuring that if any of the SMS toggles are selected, the number must exist and be in the correct format. Additionally, if none of the SMS toggles are activated, the number can either be empty or, if entered, it still must be in the correct format. @luka.trdina , @maja.pilipovic , @mislav.sirac

- 🔧 Fixed the issue where eligibility data for the second AIP was not displaying in the Admin Panel. Now, all available AIPs show their eligibility correctly. @filip.cogelja , @luka.ferlez , @maja.pilipovic

- 🔧 Fixed the issue where the "+More" tag was only partially clickable. The "+more" button is now fully clickable on Premium Quoter and on the endorsement details when adding or editing in DRP and LRP insurance plans. @luka.trdina , @maja.pilipovic

- 🦵 Fixed the issue related to email notifications for ended endorsements by improving the display adaptability, ensuring optimized viewing across diverse screen resolutions. This enhancement has been specifically applied to DRP and LRP notifications for both Agents and Producers. @maja.pilipovic , @leon.cvrtila

- 🦵 Fixed the issue where videos were not sorting correctly by the latest date in the 'Dairy Market Updates' section on the Education page. Now, upon opening the page, the videos are displayed chronologically, with the newest video appearing at the top as intended. @maja.pilipovic , @luka.trdina

LRP

🔧 Improvements

- 🦵 Fixed the issue where users were unable to add an endorsement for the Demo operation on Production. Now, agents or global admins can successfully add endorsements for both Demo and Real operations, and these endorsements are promptly added to the list as expected. @luka.trdina , @maja.pilipovic

DRP

🔧 Improvements

- 🦵 Resolved Blank PDF Issue from Email Link. The PDF now successfully downloads when viewing DRP endorsements through the provided email link, ensuring proper loading of the page from the link and successful PDF download for the ended endorsements. @luka.trdina , @maja.pilipovic

LGM

🔧 Improvements

- 🦵 Fixed the issue in the Premium Quoter's What if Analysis section where changing corn, milk, and soybean meal prices was not properly adjusting the prices for the corresponding month. @marin.ladovic
